ARROWHEAD MINE IN BUNCHES RUBY SILVER

Development in the Arrowhead mine during the past week has been very satisfactory to the management. The main work now being pressed is drifting on the vein on the third, or 267 level.

Two distinct streaks of high-grade silver sulphides are in evidence in the west drift. These streaks are about four feet apart, with good milling are between Ruby silver is very abundant in the bunches, wall streak, which assays for eight inches in width 278 ounces silver per ton and \$11.40 per ton gold.

According to the mine map, the ore struck recently is the downward course of fault corresponding to 101 and 201 on levels above. This fault pitches 30 degrees toward the main west fault and would intersect west fault at about 650 feet. It is more than likely that the mineralization was from west fault ascending through this minor fault.

The main orebody so far explored above lies ahead in the west drift third level. The ore from 301 fault still continues, and it is hoped it will until the mineralization direct from west fault is encountered on this level.

Sticking will again be started, as the water from the vein has about drained itself to that level.

3 MEXICANS KILLED; 2 INJURED

A head-on collision between a work train and No. 3 passenger of the Tonopah & Tidewater railroad occurred 10 miles south of Tonopah yesterday. Both engines were demolished and several cars badly wrecked. Three Mexicans riding on one of the cars attached to the work train were killed and two others severely injured. Conductor Thompson of the work train was thrown against a car and sustained internal injuries.

Officials at the Goldfield office today stated that in all probability the cause of the wreck was a misunderstanding of orders by the work train crew. No. 3 was late, it was said, on the north trip, and the crew of the work train misjudged the time.

Doctors were rushed from Goldfield and also medical assistance from Lodi. The Mexican laborers were employed by the company on the section and were riding on a flat car next to the work train engine. Both engineers applied the emergency brakes when the engines neared the spot where the collision occurred, but the trains could not be brought to a stop until the engines telescoped.

General Passenger Agent Aspland stated today that the wreck was being cleared, and it was thought that the trains would be running on schedule by next Monday.

(By Associated Press)

The committee rejected the amendment by Mason of Illinois that invitations to participate in the conference be extended to include the Philippines.

Although Democrats on the committee started to report the resolution to the house, they questioned the propriety of requesting President Wilson to act on the eve of his departure from office. Representative Connally, of Texas, declared the proposal should be left over for consideration of the new president, adding that Mr. Wilson might not be disposed to issue the call because of the belief that it might embarrass his successor. The vote was taken after Chairman Porter explained it was the purpose to have the resolution ready for Harding and that nobody had a thought of causing embarrassment to President Wilson.
